## Special Issue on **Innovative Services and Applications of Wireless Sensor Networks**

Wireless Communication Systems and especially Distributed Sensor Networks have received growing attention in recent years from various perspectives. The thriving numbers behind wireless communication systems adoption and contribution have contributed to a new kind of entrepreneurship and innovation.

The objective of this special issue is to analyze the business aspects of mobile and wireless sensor networks as they are applied in different domains of human activity (e.g., e-health, cyber physical systems, traffic systems, games, GPS, Urban computing applications, Smart Cities infrastructures, Cultural Heritage Management). Technical contributions can be expected to be described as part of the applications and services proposed. The ultimate objective of this special issue is to serve as a reference edition for all those in Academia, Industry and Research interested in the integration of Mobile and Wireless Sensor Networks with the Economy and the Business World.

Potential topics include, but are not limited to:

- Mobile and wireless sensor services in various domains of human activity (e.g., e-health, cyber physical systems, traffic systems, games, GPS, Urban computing application, Smart Cities infrastructures, Cultural Heritage Management).
- Startups and Entrepreneurship powered by wireless sensor networks
- New Business models for the exploitation of wireless sensor networks
- International Collaboration and exemplary projects
- Applications of Distributed Sensor Networks for Green networking, Socializing and E-commerce
- E-Health
- New Markets for Streamline Services and Applications

The submitted manuscripts for this special issue will be peer-reviewed before publication.
