While water has become a vital concern globally in the wake of anthropogenic climate change, its regulation and control has long preoccupied humans. Water has also played a central role in ritual life around the world. This special issue will explore how humans in the medieval world constructed social and political institutions and deployed technology to optimally utilize available supplies of water. It will also explore the ritual and cultural dimensions of water. Some of the questions that papers may address include: How were problems of water shortage or surplus addressed? How did humans relate to rivers, lakes, and seas? How were irrigation systems constructed and managed? How did past periods of climate change affect water regimes and what were the responses? How was water used in religious and other ceremonies? What gave water ritual power? These are some questions that papers may address, but the editors are open to other topics as well.

The editors anticipate a special issue with broad geographical coverage of the world between 1000 and 1800.

Submission Guidelines
In preparing manuscripts, authors are requested to follow the Author Guidelines available on the journal homepage at https://us.sagepub.com/en-us/nam/journal/medieval-history-journal#submission-guidelines

Please send paper proposals (500 words maximum) to Prasannan Parthasarathi at parthasa@bc.edu

Submission Deadline: July 1, 2019.

Full papers will be due by January 1, 2020, for publication in the Fall 2020 issue of the journal.
