Get published! Submit your research to **World Future Review**

**Benefits of Publishing in This Journal**

When you publish in *World Future Review*, you will receive:

- Prompt publishing
- Guaranteed targeted, multidisciplinary audience
- High visibility for maximum global exposure

**About the Journal**

Now in its fifth year of publication, *World Future Review* is a refereed journal that seeks to expand communication among the researchers and practitioners now exploring trends and alternatives for society. We welcome articles that: 1) assess techniques for studying future options; 2) fairly evaluate probable, possible, and optimal outcomes of existing policies and practices in every field; and 3) facilitate the exchange of futures-relevant information among cultures. Our aim is to help all peoples develop sustainable lifestyles and technologies that respect the carrying capacity of Earth’s environment, while promoting new research into areas beyond today’s known limits.

**Submit Papers in These Areas**

The editors of *World Future Review* invite manuscripts from contributors worldwide whose essays fall within the broad spectrum defined as “futures research.” This encompasses both an evolving philosophy and a range of specific techniques primarily aimed at assisting decision-makers to better understand the potential consequences of present and future decisions by developing images of alternative futures.

We are especially seeking the following types of material:

1. Methodological and conceptual papers regarding futures study techniques;
2. Papers based on research, analysis, and modeling of presumed causes and potential developments affecting current social, economic or political conditions;
3. Papers evaluating the actual outcomes achieved by government and corporate planning efforts and/or assessing the common practices of professional futurists;
4. Papers about futures research practitioners (whether individual, corporate, or governmental) and their contributions to the art and science of futures research.
5. Scholarly reviews that compare past efforts at forecasting and/or depictions of future societies in fiction or popular media, with actual events and current trends.
This is a journal primarily by and for professional futurists. But, because we seek to promote dialogue between communities of theoreticians, practitioners, and beneficiaries, assumptions as to the technical knowledge and sophistication of readers should be minimized. We urge contributors to avoid, or at least explain, any specialized terms or jargon not commonly used outside a specific discipline.

We believe that “serious” futures study can fruitfully draw upon material created by writers and other artists whose primary aim was entertainment. Such works often have considerable impact on public perceptions and expectations of future life. However, to be useful to researchers exploring possible, probable, and preferable futures, we expect that speculative fiction will be examined with the same degree of critical thought applied to historical records and scientific papers. Our primary criteria for “good futures writing” are relevance and quality, and our overriding needs: clarity and simplicity of expression.

All manuscripts are evaluated anonymously by at least two members of our editorial board and may be subject to minor editing to meet standards of our journal. Any substantive revisions will be returned to the author for approval prior to final acceptance.

Articles should be submitted to http://mc.manuscriptcentral.com/wfr, and should not normally exceed 6,000 words. Reference citations should be numbered in sequence, and placed after main text beginning on a separate page. Follow the Chicago Manual of Style regarding orthography and word usage.

All manuscripts submitted should be Microsoft Word files. Illustrations, pictures and graphs should be supplied with a resolution of at least 300 dpi. Please note that color images will be published in color online and black and white in print (unless otherwise arranged); therefore, it is important that you supply images that are legible in black and white.
